

WEATHER WARNING SYSTEM

Safety of the members, guests, staff and neighbors are our concern at The Marcus Jewish Community Center of Atlanta. No weather event is more dangerous than lightning. Because of this threat, the Center has installed the Thorguard Lightning Prediction System. This system can provide advance warning of a lightning hazard, allowing you the time to seek shelter. The system continually monitors and evaluates the electrostatic atmosphere and can predict the probability of a lightning hazard in an area up to 15 miles. It also provides information on the risk in the immediate area of our facility.

You will be alerted by one loud horn blast that will last **15 seconds**.

Upon hearing the horns, everyone should seek shelter immediately.

When this occurs, strobe lights located on the top of the main building will activate and remain active while under a weather alert. Every attempt should be made to seek shelter in a safe environment. The Thorguard system will determine when conditions are safe to return to your previous activities and **three 5-second** blasts will indicate that everything is all clear and the strobe lights will cease operation. The horn will only sound during normal operating hours for the building.

SEEK SHELTER AT: Permanent Buildings & Vehicles

ALWAYS AVOID THE FOLLOWING:

Open Areas
Athletic Fields and Bleachers
Bodies of Water
Doors & Windows
Isolated Trees
High Elevations

WEATHER HOTLINE: 678.812.4001
